

# Ranpak Wrapping Systems... the Natural Choice

## Full-Size WrapPak®

*high volume padding for  
all wrapping needs*

### Full Featured Wrapping System Offering Versatile Operation Modes

The WrapPak converter forms two bundles of fanfold kraft paper (available in a combination of basis weights and crimp) into a resilient and shock absorbing cushioning pad to protect products during shipment. WrapPak is ideal for lining the bottom of the box, product separation or securely wrapping products.

Minimal training is required to operate the converter. Five standard modes of operation are available and an advanced Pad Delivery System (PDS) mode can be custom ordered.

Ranpak's patented fanfold paper with splicing tape virtually replaces the need to reload the converter optimizing uptime and throughput.

**Fast** - produces 18 inches of cushioning pad per second

**Adaptable** - 5 modes of operation allow for batch production or inline, just-in-time use.

**Waste Reduction** - 12-in. wide pad is automatically cut to the exact length

**Environmentally Friendly** - 100% biodegradable, recyclable and renewable paper

## Package Engineering

Ranpak's Packaging Engineers are experts in the design, analysis and testing of in-the-box packaging. Send your packaging challenge to Ranpak and one of our Packaging Engineers will design a customized packaging solution that will ensure your product is delivered to your customer damage-free.

Each package design report provides you with our recommended packaging solution and includes a thorough cost analysis and comparative test results. The report clearly shows how you can save on material costs while realizing damage reductions. Ranpak's Packaging Engineers and Sales Representatives can visit your facility to train your packers on how to use our products as well as perform an on-site cost analysis.
